BE CSE/AIML VI Semester-June- 2024

Class Test – II- (20 marks)

Time : 12:00 noon to 1:00 p.m. **Distributed Systems** **Date : 11-06-2024**

Part-A (3 *2 = 6 Marks) Answer All Questions

		Mks	CO	BT
1	What is the NEED for algorithms for coordinator election in trying to achieve synchronization	2	1	3
2	State the advantages of 3 phase commit protocols for Fault tolerance.	2	3	2
3	How is Gossip Based Publish Subscribe system more useful as compared to just a peer- to peer coordination based systems.	2	2	4

Part- B (2 * 7 = 14 Marks) Answer any TWO of the three given.

4	a)	Static voting and Dynamic voting are used in providing solutions for fault tolerance by replication. Distinguish between these.	4	1	2
	b)	What is are key features of CORBA which make it a preferred solution.	3	3	3
5	a)	What is are the basic features of Naming in Distributed file systems. Use any example system to explain.	3	1	3
	b)	Caching is very important for enabling availability requirements for web based systems. What alternatives for web caching are possible ? Compare.	4	2	4
6	a)	Briefly discuss how the Fault Tolerance is achieved in Distributed Coordination based Systems.	2	2	2
	b)	For A Word Counting Example on <Key, Count> Distribution, give a suitable diagram and explain it's working as in any Map Reduce approach.	5	3	3
