Department of Computer Science and Engineering
University College of Engineering (A)
Osmania University
B.E (CSE) VI-Semester II-Internal Examination-2026

Subject: **Human Computer Interaction**

Time: 9:30 to 11.00 am .

Max. Marks: 30

Note: Answer all Question in Part-A and any two in Part-B

Date: 07-05-2026

Q.NO	Part –A (5 x 2 = 10)	Marks	BT	CO
1	Define the five key issues in data gathering for Interaction Design.	2	2	3
2	What is the main difference between quantitative and qualitative data analysis in HCI?	2	3	3
3	Briefly describe the purpose of creating "Personas" and "Scenarios" when establishing requirements.	2	2	4
4	Differentiate between high-fidelity and low-fidelity prototyping.	2	1	4
5	Explain what is meant by "AgileUX" and its significance in software development.	2	2	4

Part –B (2 x 10 = 20)

6 (a)	Discuss the primary techniques used for data gathering (Interviews, Questionnaires, and Observation) along with the specific trade-offs of each.	5	2	3
(b)	Explain how data recording and data interpretation are performed after conducting an evaluation or user study.	5	3	3
7 (a)	Examine the process of developing user requirements, focusing on how use cases are captured and utilized to bring requirements to life.	5	2	4
(b)	Describe the construction process in Interaction Design, detailing how prototypes transition from conceptual design to concrete design.	5	3	4
8 (a)	Outline the practical challenges of integrating Interaction Design within software development practice, focusing on Design Patterns and open-source resources.	5	3	4
(b)	Describe the various kinds of analytical frameworks used to support data analysis and presentation of user research findings.	5	3	3
